Airport

Rehabilitation

Hasco is experienced in installing tie-downs that will meet your required specifications. We have specialized equipment to remove existing tie-downs.

Hasco has a paint removal system that uses a high speed scarifire that is less invasive than water blasting. We do offer water blasting as an option when required.

Hasco offers the following services:

Anchors

Tie Down

Paint

Removal

Removal

Rubber

Skid

Testing

Rejuvenation

Benefits of **PaveRx**

PaveRx is an asphalt sealer rejuvenator. It adds longevity to the life cycle of the asphalt.

It reduces raveling and the loss of fines, provides protection and it is fuel resistant. **PaveRx** is an effective sealer that penetrates the existing surface and rejuvenates the underlying asphalt. We reduced the viscosity of the existing asphalt by 89% at the Huntsville-Madison County Airport in Alabama. **PaveRx** is very durable and contracts and expands at the same rate as the asphalt. **PaveRx** seals and rejuvenates and can be used on grooved runways without changing the surface structure.

Application of **PaveRx** every 4-5 years will extend the life of the asphalt pavement and reduce the life cycle cost by 67% or more. With its superior field performance on roads, parking lots, and airfield pavements, **PaveRx** is revolutionizing the long term maintenance of asphalt.

Runway & Taxiway Markings

The safety of your runway is important to you and everyone who visits your airport. To insure that safety it is important to pay special attention to your runway and taxiway markings. When re-doing the

markings, you will be refreshing the look of your airport and providing the safety that is required. Our paints are fast drying, to insure a clean finish and little downtime. We also offer a variety of reflective media.

Crack Sealing Options

Crack sealing is a low cost preventative maintenance choice. It is so effective that HASCO has a standing contract with North Carolina Airports, that takes care of all their crack sealing needs.

Hasco also offers the following crack sealing options: Grout (usually used on large cracks), Fabric and Hot-mix asphalt.
